AGENDA ITEMS		PRESENTER
Predictive Services Update: ...Windy Today... Near normal temperature/humidity levels for early September. Increasing southwest winds increase flow returns to the Great Basin and there is a concern that SW winds of 20-30 mph could affect our current large fires in Idaho by this afternoon. Fortunately, humidity should be coming up about 5-10% from yesterday's afternoon levels. These increasing SW winds are due to another low dropping in from the Pacific NW. By early Thursday it should bring clouds to our western areas, then occasional showers and isolated wet thunderstorms Thu-Sat. Lingerin cool conditions thru the end of this coming weekend. Precipitation amounts in Central Idaho are expected to range from 0.35 to 0.75 inches during this 4-day stretch of cool, moist weather. A gradual return to near normal temperature/humidity by early next week, but no extreme heat or dryness is expected.		Predictive Services : Basil Newmerzhycky
New Fire Activity/GACC Update: Light IA – 7 new starts / 7 acres 9231 for the large fire growth. Demasters' T2 IMT available today		Center Manager/COD
NMAC Update: Hazmat with FFTR's flying commercially. Need to address at the local level. Questions about team mobilization: Unclear at this time, depends on when the other teams time out.		NMAC Liaison
